

ABOUT STEALTHbits

STEALTHbits Technologies, Inc. provides a rich set of solutions to help manage your Microsoft infrastructure and beyond. As an industry leader in Auditing, Reporting, and Compliance software, solutions from STEALTHbits increase efficiencies, reduce downtime, and optimize the performance of your systems and applications to provide instant value and the quickest return on investment.

StealthAUDIT

StealthAUDIT is a lightweight, high speed and agent less tool. Using Data Collectors, information is returned on nearly every attribute with respect to Windows servers, workstations, Active Directory, Exchange, and more.

To ensure maximum flexibility, results are stored in Microsoft SQL Server and a built-in report writing engine enables the information to be delivered in a variety of formats; email, published, Excel, or XML.

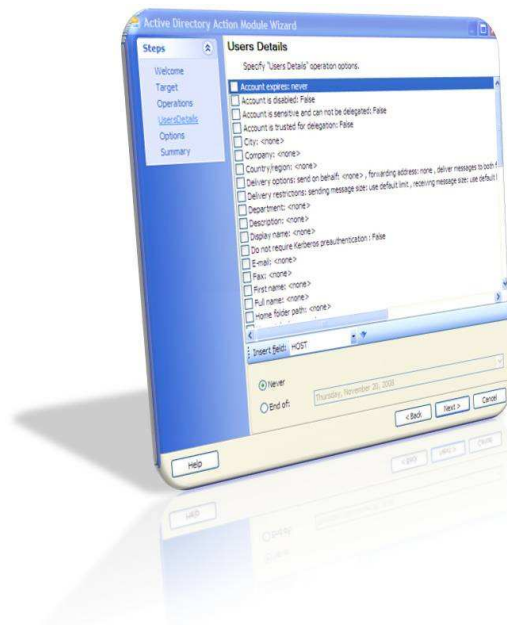

Instant alerting is provided by tracking critical thresholds via the change and conformance module, and analysis will provide email notification any time such changes have taken place.

Rich historical data collection endows our customers with powerful trending and statistical capabilities.

StealthAUDIT comes packaged with pre-built solutions for Exchange, Active Directory, Public Folders, Inventory Management, Compliance, Patch Validation, BlackBerry, and much more!

StealthAUDIT for Active Directory

Active Directory Action Module

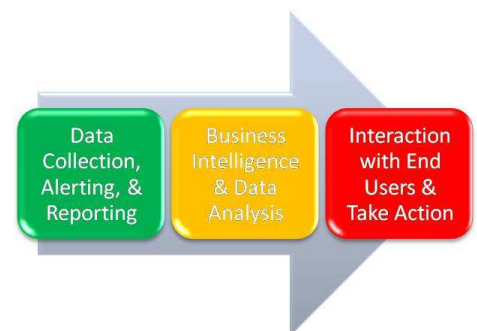

It's time to
take
ACTION!

In today's fast paced and demanding world of Information Technology, IT administrators need to keep pace by not only auditing their environment, but assessing how to respond to the mountain of data that is at their fingertips and take targeted actions to keep their environments in check.

StealthAUDIT supports multiple snap-in "Action Modules" providing the functionality necessary to taking administrative action on the data collected, interact with end-users in the decision making process, and make changes to remote systems right from StealthAUDIT's central console. It is through the Action Modules that the StealthAUDIT engine is able to effect change on remote hosts and help maintain order in your environment.

StealthAUDIT helps administrators not only collect large amounts of data from their IT environments quickly, but by leveraging our built-in business intelligence and Data Analysis modules, administrators can reduce the amount of interpretation needed before performing actions against the data. Turning data into information faster puts StealthAUDIT users in a position to take action sooner!

Feature Functions

Getting Started

The Active Directory Action Module was designed to help AD administrators handle a variety of bulk remediation tasks with flexibility and ease. After StealthAUDIT has collected and analyzed the data appropriately, a wizard-driven interface will walk the StealthAUDIT user through a series of steps in performing a desired “action”. Currently available “actions” include:

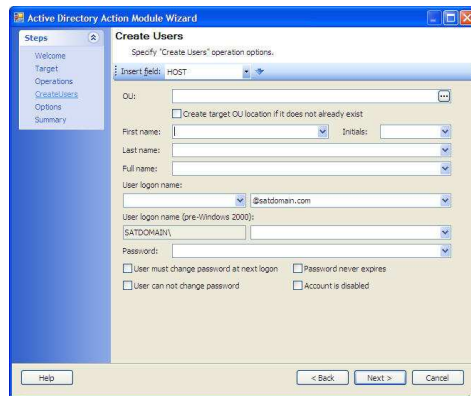

- **Create Users**
- **Delete Objects**
- **Disable/Enable Users**
- **Group Details**
- **Group Membership**
- **Move Objects**
- **Set/Reset User Password**
- **Unlock Users**
- **User Details**

StealthAUDIT's Action Module Framework:

StealthAUDIT helps administrators not only collect large amounts of data from their environments, but by leveraging our built-in business intelligence and Data Analysis modules, administrators can reduce the amount of interpretation needed to take action against the data. Turning data into information faster provides the ability to take action sooner, all with a single solution.

ACTION MODULES

- Send Mail
- Survey
- Public Folder
- Mailbox
- Active Directory
- File
- Registry
- And more to come!

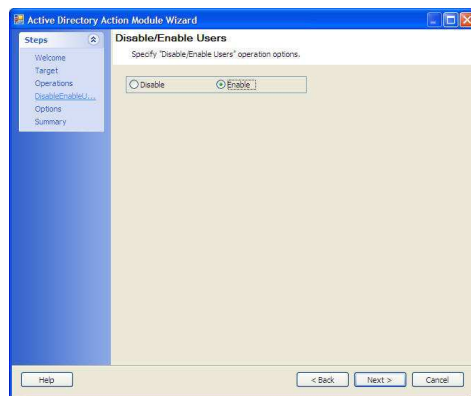

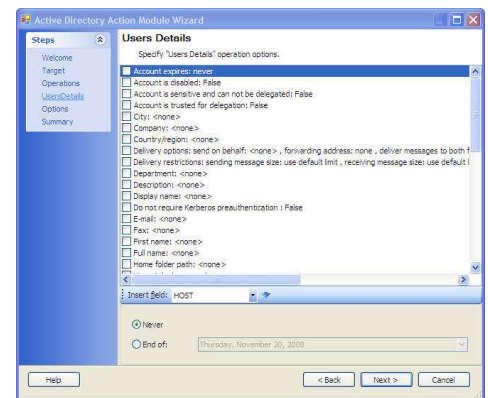

Create Users

Creating new users in bulk is simple with basic options for adding users to existing or new organizational units, setting First, Last, Full Name, and Initials, User Logon Name, and Passwords. Options are also included to force users to change their password at next logon, set passwords to never expire, disable the ability for the user to change his password, or disable the account.

User Details

Populating user details can be time-consuming and tedious for administrators, but can benefit an organization greatly in a variety of ways. The AD Action Module makes short work of this daunting task by enabling the population of over 40 configurable user attributes in a few clicks of your mouse.

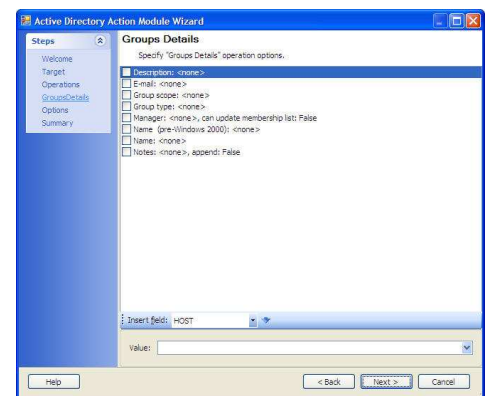

Disable/Enable Users

Simply disable or enable users based on any defined criteria.

Group Details

Quickly update group details such as Descriptions, E-mail, Group Scope, Group Type, Manager, Name, and Notes. Additional settings even allow for the restriction of Group Membership updates and the appending of supplementary notes.

System Requirements

Operating Systems

- Microsoft XP Professional
- Windows 2000 Server
- Windows Server 2003

Microsoft Active Directory

- 2008
- 2003
- 2000
- NT4

Platform

Pentium 4 class or greater

Memory and Disk Space

1Gb RAM minimum (2Gb recommended)

1Gb Available Disk minimum

100Mb Network Connection

Additional Software

MS SQL 2000+ (including SQL Express)

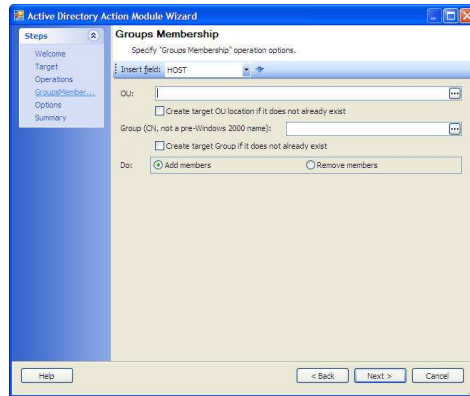

Adobe Flash

Group Memberships

Easily add and remove group members from existing groups, create new groups and assign membership, and create new OU's if an OU location does not currently exist.

Move Objects

Quickly and easily move any and all AD object types to new locations, as well as create new locations if a desired OU does not already exist.

Set/Reset User Password

Change user passwords or force users to change their passwords at next logon in bulk after scheduled maintenance periods, security breaches, or users that haven't changed their passwords in any defined time period.

Delete Objects, Unlock Users

Based upon audit results, perform simple remedies like deleting objects and unlocking users in a particular OU or across the globe!
