

## Overview

StealthAUDIT Training is provided in variety of formats, including a free series of web-based training sessions to get you up and running quickly. At the conclusion of this series, you will gain tremendous value by learning how to leverage the solution sets included with the product and creating ad hoc queries to provide valuable insight into managing Microsoft environments. The series consists of five, 90-minute courses delivered live and interactively over the web. They are as follows:

- 1) Introduction to StealthAUDIT
- 2) Introduction to StealthAUDIT for Exchange
- 3) Advanced StealthAUDIT for Exchange
- 4) StealthAUDIT for Active Directory
- 5) StealthAUDIT for Data Governance & Compliance

To attend a course:

- a) Contact your STEALTHbits Account Representative
- b) Install StealthAUDIT
- c) Attend the course

---

## Training Session Details

### Introduction to SMP

In the Introduction to the StealthAUDIT Management Platform® (SMP) Training Session, you will learn the details of how StealthAUDIT is able to reach out and query your entire Microsoft Infrastructure. You will learn how to use SQL Server to store your results, set locations where reports are automatically published, discover hosts in your environment, leverage connection profiles to communicate with your environment, and much more.

StealthAUDIT comes complete with hundreds of preconfigured jobs, reports, and solution sets that provide immediate value to StealthAUDIT users. This training session will help you learn how to work with these preconfigured solutions and even customize what STEALTHbits has already provided with ease.

Fundamental to StealthAUDIT is the concept of a “job” which queries your environment, returns the requested data, and reports on these results. The job tree (along with its components) is introduced including the Instant Job Library and Task Library. You will become skilled at building your own jobs to query nearly anything in your environment, leveraging the 30+ Data Collectors available in StealthAUDIT. The introduction will conclude with running jobs, working with the results returned, and creating reports.

### Introduction to StealthAUDIT for Exchange

**PRE-REQUISITE:** INTRODUCTION TO SMP

There are a variety of ways to have StealthAUDIT connect to and report on your Exchange environment. This course opens with the options for configuring StealthAUDIT to communicate with Exchange and validating connectivity. You will learn how StealthAUDIT connects and works with different components of the Exchange infrastructure including Exchange Servers, Domain Controllers, Virtual Servers, and Nodes. A detailed examination of the data which StealthAUDIT can return will be provided centered around topics such as Exchange Configuration, Mailboxes, Message Traffic, Public Folders, and more. Concluding the introduction will be a preview to StealthAUDIT’s Exchange Solution set which contains rich and powerful out-of-the-box reporting around a wide variety of high-visibility Exchange topics.

### Advanced StealthAUDIT for Exchange

**PRE-REQUISITE:** INTRODUCTION TO StealthAUDIT for Exchange

This course picks up from the Introduction to StealthAUDIT for Exchange by completing the overview of the Exchange Solution Set. With the foundation laid for knowing what StealthAUDIT can provide for Exchange, you will be shown how to modify querying your environment, report from multiple consoles, create scorecards and business rules, as well as customize reports. The Advanced course concludes with creating custom jobs to query nearly any property in your Exchange environment.

### StealthAUDIT for Active Directory

**PRE-REQUISITE:** INTRODUCTION TO SMP

StealthAUDIT for Active Directory training begins with a detailed examination of the Active Directory Solution Set. Reports regarding who is making changes to AD, Advanced Security and Compliance, Infrastructure, Maintenance & Clean-up, as well as Operational reports are covered in detail along with techniques to customize the solution set for your environment. Next, you’ll learn about the AD, LDAP, Users & Groups, and Group Policy Objects Data Collectors which will enable you to query nearly any property in your environment. At the conclusion of this course, you will be armed with a plethora of rich reports and ad hoc query capability.

## StealthAUDIT for Data Governance & Compliance

### PRE-REQUISITE: INTRODUCTION TO SMP

The StealthAUDIT for Data Governance Training Session focuses specifically on gathering and presenting data from your Desktops, Servers, and Distributed File Systems. Reports regarding Data Identification, Aging, Access, Ownership, Validity, and more are covered in detail, along with in-depth focus on how this data is collected and what can be done with it. You will also learn how the GPO, Users & Groups, SMARTlog, File, and System Info Data Collectors are used in conjunction with each other to answer some very complex questions about your shared files and folders. Concluding the course, focus on StealthAUDIT's Analysis Modules and Action Module Workflow will teach you how to create highly valuable, customized solutions for your own environment.

### Did you know?

More information on using the StealthAUDIT Management Platform® is available online in the STEALTHbits Forum. Visit <http://forums.stealthbits.com> for detailed guides on Data Collectors, Analysis Modules, Reporting, Solution Sets & Instant Jobs, and more!

### About STEALTHbits™

STEALTHbits Technologies, Inc. provides a rich set of solutions to help manage your Microsoft infrastructure and beyond. As an industry leader in Auditing, Reporting, and Compliance software, solutions from STEALTHbits increase efficiencies, reduce downtime, and optimize the performance of your systems and applications to provide instant value and the quickest return on investment.

### About StealthAUDIT™

Using over 30 comprehensive Data Collectors, the StealthAUDIT Management Platform (SMP) gathers information about Windows servers, workstations, Active Directory, Exchange, BlackBerry, Share Point and more, all from a single product.

Once the data is returned, administrators can view the results in customizable reports, use the platform's Analysis Modules to interact with the data, and even make changes using integrated Action Modules—all from within SMP!

### System Requirements

#### Operating Systems

Workstation: Windows 2000 and up  
Server: Server 2000 and up

#### Application Versions\*

MS Exchange Server v.5.5 - 2010  
BlackBerry Enterprise Server v4.x - v5.x  
Active Directory 2000 – 2008

#### Platform

Pentium 4 class or greater  
1Gb RAM minimum (4 GB rec.)  
1Gb Available Disk minimum  
100Mb Network Connection

#### Additional Software

Microsoft SQL 2005+ (including SQL Express)  
Exchange System Manager  
Adobe Flash

\*Requirements vary based on product
