

STEALTHtip #13

Did You Know? Understanding Warnings

StealthAUDIT checks each table for a JobRunTimeKey column. If this column does not exist in your table (Which is common for tables generated by an analysis module) you will receive the following warning:

| | | | | |
|-----------|----------------------|---------|----------|--|
| SBNJENG15 | 1/19/2010 7:43:00 AM | WARNING | SPEngine | No timestamp column defined for SA_NewJob_VIEW |
|-----------|----------------------|---------|----------|--|

This is not an error, and the task has completed successfully.

For additional troubleshooting tips and information email support@stealthbits.com.
