

STEALTHtip #27

All About: The DNS Data Collector

Overview

The DNS Data Collector provides a simple method of identifying information regarding DNS Configuration and Record Types.

The DNS Data Collector allows a StealthAUDIT user to select the Configuration or Record Type properties they desire for data collection purposes.

For an in-depth listing of all available properties, refer to Appendix A.

To learn how to use the DNS Data Collector, follow the instructions in tomorrow's "How To: Using the DNS Data Collector" STEALTHtip!

For additional troubleshooting tips and information email support@stealthbits.com.
