

STEALTHtip #3

Q&A Tip: StealthAUDIT features great Patch Validation Jobs. Learn to leverage them with the details below!

Q: How often are Patch Validation Jobs produced?

A: STEALTHbits Technologies releases Patch Validation Jobs every month following Microsoft's Security Bulletin Release occurring the second week of each month. Releases consist of one Patch Validation job per Security Bulletin, where applicable.

Q: How are Patch Validation Jobs distributed?

A: Patch Validation Jobs are distributed to customers in MSI package format. The packages are made available to customers via download from a distribution email. Those not on the Patch Validation Distribution List can make a request to their sales representative or by emailing STEALTHbits Support at support@stealthbits.com.

Q: If I have not installed Patch Validation MSI installation packages in a while, how do I get ensure I have the latest jobs?

A: It is not necessary to install Patch Validation installation packages on an individual basis; all packages are cumulative. Patch Validation MSI installation packages contain a running list of patch jobs produced within that calendar year. Therefore, customers looking to update their Instant Job Patch Validation libraries to include March and April's jobs in May only need to install one package from the current time period.

Q: Where do I find the Patch Validation jobs after the MSI package is installed?

A: After installation, the Patch Validation jobs will be found within the Instant Job Library under their respective release-year category. For example, February 2009 Patch Jobs will be found in the 2009 Patch Validation Job library.

Note: *The Instant Job Library is accessible by clicking the first icon on the tool bar or by right-clicking the Jobs tree within StealthAUDIT and selecting 'Add Instant Job'.*
