

Simplifying Shared Folder Management

ABOUT STEALTHbits

STEALTHbits Technologies, Inc. provides a rich set of solutions to help manage your Microsoft infrastructure and beyond. As an industry leader in Auditing, Reporting, and Compliance software, solutions from STEALTHbits increase efficiencies, reduce downtime, and optimize the performance of your systems and applications to provide instant value and the quickest return on investment.

StealthAUDIT

StealthAUDIT is a lightweight, high speed and agent less tool. Using Data Collectors, information is returned on nearly every attribute with respect to Windows servers, workstations, Active Directory, Exchange, and more.

To ensure maximum flexibility, results are stored in Microsoft SQL Server and a built-in report writing engine enables the information to be delivered in a variety of formats; email, published, Excel, or XML.

Instant alerting is provided by tracking critical thresholds via the change and conformance module, and analysis will provide email notification any time such changes have taken place.

Rich historical data collection endows our customers with powerful trending and statistical capabilities.

StealthAUDIT comes packaged with pre-built solutions for Exchange, Active Directory, Public Folders, Inventory Management, Compliance, Patch Validation, BlackBerry, and much more!

Shared Folder management seems very simple on the surface: you create a shared folder, assign a group of users associated to a department or project, and the users take over posting items to them. Users will call the helpdesk to be added when needed; right?

It's not uncommon for medium- and large-sized organizations to have several hundred thousand folders that consume gigabytes to terabytes of space on network storage devices. Many organizations have deferred getting a handle on Shared Folders over the past decade and after years of unchecked growth, both storage requirements and the cost to manage them have outpaced the cost of storage. Many organizations are also beginning to launch Identity & Access Management programs, and with this comes the need to run ownership recertification and entitlement reviews on who has access to what data.

- Identify Data Access & Effective Permissions
- Establish Comprehensive Clean-up Campaigns
- Establish Owner Recertification & Entitlement Reviews
- Track Changes and Access to File Systems
- Provide Capacity Planning & Trending Reports

In anticipation, some organizations have chosen to adopt new web-based, collaborative applications to share information. Whether your organization is planning to archive, retire, migrate, review owners and members, or just intend to do some clean-up on the terabytes of data being consumed, StealthAUDIT can help you simplify a very complex objective.

New enhancements to StealthAUDIT provide you with the capability to audit Shared Folder locations across your Microsoft environment and various appliances. Our out-of-the-box Solution Set gives you everything you need to get started with your initiative in only a few short hours. Charts and graphs of the data provide various levels of detail that position you to launch into action and summarize project progress.

StealthAUDIT Data Collectors:

Active Directory

Group Policy

LDAP

Users & Groups

Exchange Availability

Exchange Configuration

Exchange Mailbox

Exchange Public Folder

Exchange Metrics

ODBC

Disk Info

Event Log

File System

INI File

Patch Check

PerfMON

Registry

Script

Services

SMARTlog

System Info

Text Search

WMI

UNIX

IP Sweep

NetBIOS Browse

Product Overview

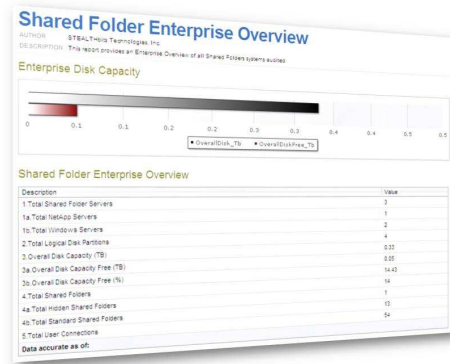

Content

Establishing a baseline by which to track and gauge success is a critical and necessary component of virtually any project. StealthAUDIT's Shared Folder Solution Set includes out-of-the-box content analysis reports providing both summary and detailed information regarding the type, size, and age of the content discovered in the environment in order to provide administrators with the information they need to understand where and how to prioritize efforts for various initiatives associated with their Shared Folder environments.

Infrastructure

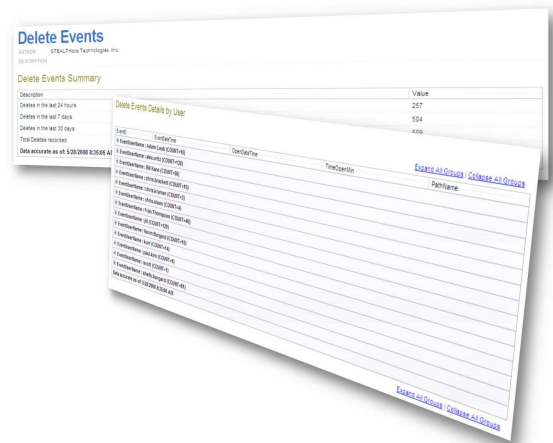

For many organizations, especially those having utilized shared folders for an extended period of time, understanding something as simple as where file shares exist can be a tedious task. Furthermore, complete and accurate assessment of the file shares throughout the environment can only be accomplished if certain criteria are met such as the enablement of Auditing Policy. StealthAUDIT's Shared Folder Solution Set includes detailed infrastructure reports to verify all the proper prerequisites are in place to ensure complete and accurate assessment of the environment.

Additional reports also include summaries of where shares exist, their sizes, and the percentage of space each share occupies on the root. Diagnostic reports pinpoint troubled hosts where policies or credentials are insufficient,

Changes

Managing and understanding change within the file system can be a difficult task without the right solution. StealthAUDIT's Shared Folder Solution Set provides granular reports on who is accessing or deleting files and folders...and from where!

System Requirements

Operating Systems

- Microsoft XP Professional
- Windows 2000 Server
- Windows Server 2003

Supported File Systems

- All Windows Platforms
- NAS/SAN
- Other Appliances

Platform

Pentium 4 class or greater

Memory and Disk Space

1Gb RAM minimum (2Gb recommended)

1Gb Available Disk minimum

100Mb Network Connection

Additional Software

Microsoft SQL 2000 or greater (including SQL Express)

Adobe Flash

HOST	Location	DisplayName	Owner	Group/OwnerName	Permissions	Allow	ApplyTo	Deny	EffectivePermissions
	\\Name : AAC (COUNT=1)								
	\\Name : casv (COUNT=1)								
	\\Name : olva (COUNT=1)								
	\\Name : Documents (COUNT=1)								
	\\Name : Pac (COUNT=2)								
	\\Name : Printer (COUNT=1)								

Permissions

Whether you're looking to review permissions on managed or un-managed shares, SA is the best application to audit, assess, and make sense of permissions to shared file systems. Out-of-the-box reports highlight open shares, identify disabled accounts that still have permissions, and provide an in-depth look at effective permissions when combining share and NTFS permissions.

Key Benefits

Immediate ROI

No agents to deploy, no back-end management servers, limited database requirements.

Speed

600,000 Files / 600GB of Data per hour for a single system. 18,000,000+ Files / 18TB of Data per hour when multi-threaded.

*Results may vary.

Complete Visibility

Complete access to virtually any property contained with a Windows Operating System, Active Directory, and many other applications all from a single product.

Flexibility

Open architecture provides complete freedom to build your own queries. Use pre-built, customize or build from scratch, all without the need for scripting.

Web Output

Extremely easy to use drag and drop report authoring including both tables and charts.

Remediation

StealthAUDIT Action Modules empower administrators to fix issues and make progress faster.
